

INFORMATIONAL MEETING

**Sunday Jan. 11th 11am - 2:30
Retreat Sportsman's Club
Presentation @ 11am**

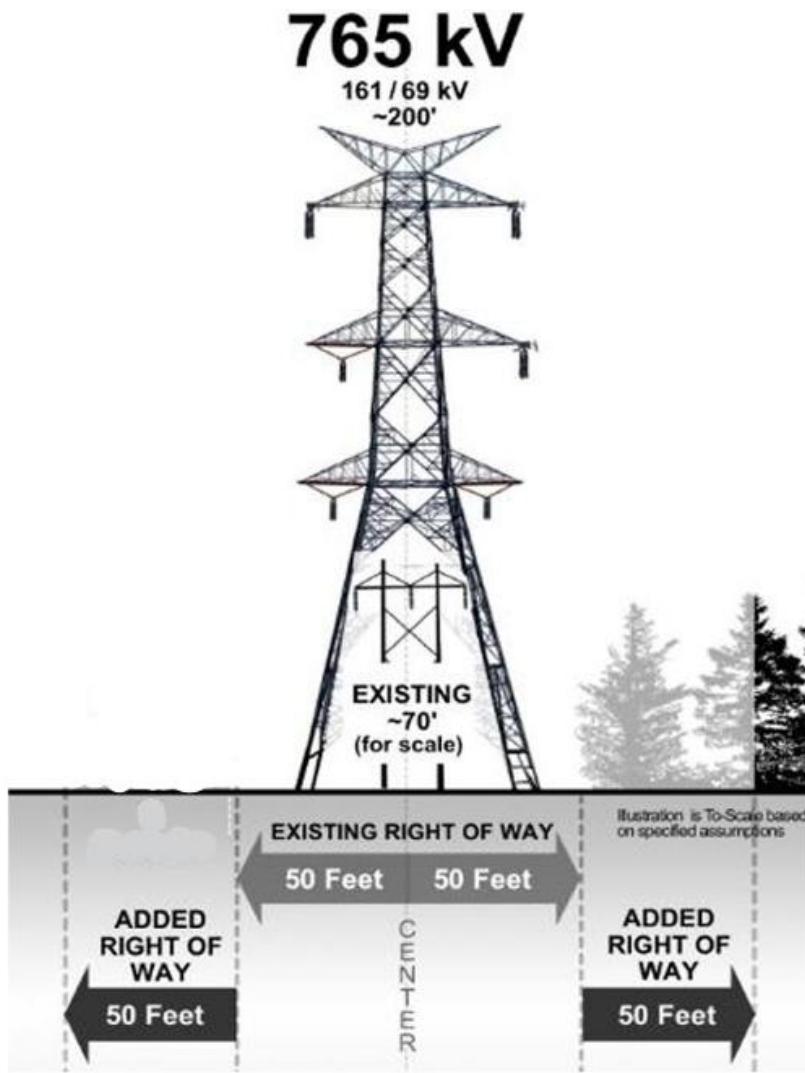

This is a meeting for landowners in the Towns of Genoa and Wheatland with an existing 161 kV line on their property and who stand to be directly impacted by the proposed Maribell 765 kV transmission line. It is also for town board members and for people interested in helping to organize similar meetings with directly impacted landowners in their communities.

The presentation will start at 11am. After a very short overview, we will begin Q&A.

Assisting with discussion will be Rob Danielson, a potentially impacted landowner in the Town of Stark, Vernon County. Rob has been a student of utility expansion planning since 2011 and an intervenor in the Badger-Coulee and Cardinal Hickory Creek 345 kV expansion transmission line proposals.

If you are a Town of Genoa/Wheatland potentially impacted landowner and are unable to attend...
Please contact Tennille Osthoff to set up an alternate meeting. 608-790-8044

Our current 161 kV lines are 70ft tall (about as tall as average trees)

The easements for 161 kV lines are currently 80-100ft.

The new 765 kV towers are 200ft tall and easements are 200-250ft.

This FIGHT is just beginning! This is NOT a done deal!
If we band together and support our neighbors - we can protect this beautiful region we live in.

For those who are not an impacted landowners... you can help by signing a petition in support of the landowner's requests to obtain detailed maps and other needed information before March 31st, 2026; in order to ask follow up questions and make informed recommendations to Dairyland Power and NextEra Transmission at least 120 days before the developers submit their application to the Public Service Commission of WI.
